

Nourivan™ Antiox

Antioxidant O/W cream base

Nourivan™ Antiox is an antioxidant enriched vanishing O/W cream base with a unique formulation. This vehicle combines natural antioxidants and a nourishing formulation to give Nourivan™ Antiox its unique antioxidant and skin hydration properties.

Nourivan™ Antiox is especially formulated to be compatible with active pharmaceutical ingredients (APIs) and dermatological ingredients (DCIs) susceptible to oxidation, such as resorcinol and hydroquinone.

Designed according to the latest insights into topical vehicle safety and tolerance, Nourivan™ Antiox is free of harmful, obsolete and controversial ingredients.

The composition is based on natural antioxidants, ascorbic acid (vitamin C) and tocopherol acetate (vitamin E), O/W emulsifiers, lubricants and emollient. The color of these ingredients can differ from white to slightly yellow, and this influences the color of the end product - Nourivan™ Antiox.

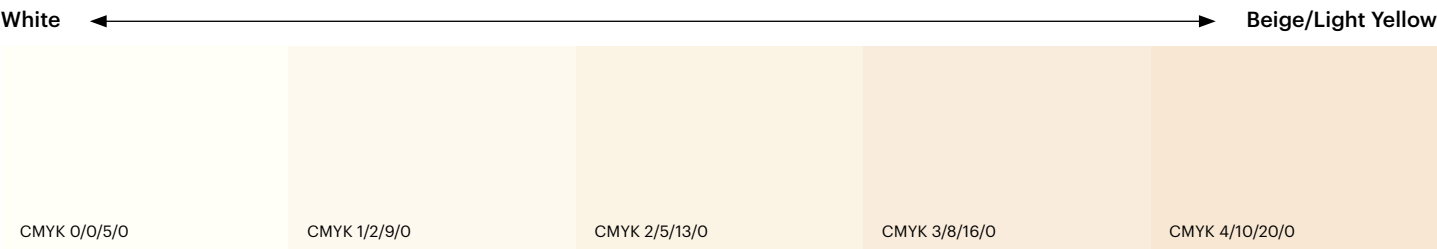

Furthermore, ascorbic acid can be subjected to a minor degradation over time, and this can cause a slight color change of the vehicle towards a beige or light yellow color.

Nourivan™ Antiox suits the needs of balanced and (very) dehydrated skin.

Color nuances range of Nourivan™ Antiox

To guarantee a quick, simple, and valid verification of the color of Nourivan™ Antiox, Fagron has elaborated a color guide chart for this vehicle. This chart represents the color range of Nourivan™ Antiox. When the color of the product corresponds to the range defined

below, the product can be considered within specifications. For the best results and most accurate colors, please print this document in high quality.
